API Portal – Non-individual prefill

API Implementation options

MTAS – Non-individual prefill TT27

The ATO will offer a non-individual prefill API via the API Portal, with delivery targeted for Tax Time 2027.

We are seeking DSP input on the preferred API breakdown.

Implementation options

Option 1:

Implement a prefill API per non-individual tax

Eg base forms:

- **Company Tax Return**
- **Trust Return**
- **Partnership Tax Return**

When new data is available for prefilling this will be added to the base form prefill API's

Option 2:

Implement a prefill API per data category/area

This would mean there would be a prefill for Trust distributions

And in future other data categories would be new API's

Option 3:

Implement a generic non-individual prefill API

Single API to retrieve all ATO known prefill data for any type of non-individual

When new data is available for prefilling this will be added to this generic prefill API's
