

CAPABILITY 1394925: EFT SUBSCRIPTION (EFT REPORT) [EFTRS]

Feature 1284923: Update EFTRS Schema to align to the data being sent by the backend

1 OVERVIEW

Currently in Production the EFTRS service is returning clients full name including the title into the data element prescribed only to the clients first name within the schema. This does not align to the design documentation published externally.

2 SOLUTION OPTIONS

OPTION 1 – UPDATE EXTERNAL PLS SCHEMA

Update the external PLS EFTRS schema. Modify the PLS Schema to remove the client name elements and replace that with the 'unstructured name' data element to return the clients full name. in the one element.

SERVICE DESIGN IMPACTS

- Message Structure Table [MST]
- Reporting Taxonomy [Schema]
- Validation Rules workbook [VR]
- Development Code

PROPOSED DEPLOYMENT

EVTE : 18.07.2019

OPTION 2 – UPDATE INTERNAL SYSTEMS

Engage back-end systems to investigate and remediate output where the clients name is being returned in one element.

SERVICE DESIGN IMPACTS

Unknown – pending the analysis of back-end systems. Potential PLS design impacts.

PROPOSED DEPLOYMENT

TBC – this work would need to be prioritised against other work post the analysis of the back-end system.

OPTION 3 – UPDATE PCN

No scheduled change to service Update Section 4 of the PCN 'Known Issues and Future Work. ATO will continue to engage internal teams to remediate as quickly as possible
